## Frame Options

Every slide is produced with \begin\{frame\} . . . \end\{frame\} }

## Options

\begin\{frame\} [noframenumbering] - May be used for title slide to prevent a page } number for that slide.
\begin\{frame\} [fragile] - This option is necessary if you want to use verbatim in } your slide.

## More Beamer commands

There are many other commands available in Beamer, the package that formats these slides. An example is overlay, allowing you to expose only part of the slide at one time, using the \pause command. See http://tug.ctan.org/macros/latex/contrib/beamer/doc/beameruserguide.pdf for more commands (p. 80 for overlay commands).

## Here is a frame title

Here is a frame subtitle

## Looking for the results

Here is more text.

Here's how this was made:
\frametitle\{Here is a frame title\}
\framesubtitle\{Here is a frame subtitle\}
\midframetitle\{1in\}\{Looking for the results\}
Here is more text.

Pacific
Northwest

## Two columns, organizing your slide

Since slides are in landscape mode, you may want to use two columns for many of your slides. Here is one method, entered between \begin\{frame\}... \end\{frame\} }
$\backslash$ dopage
\lside
$\% \%$ Left side column text
$\% \%$ Title in the left side column:
\midframetitle\{<distance down from top of column>\}\{<title>\}
\rside
\%\% Right side column text
\endpage

Pacific Northwest

## Using dopage...endpage for two columns

## Default Font Sizes and Two-Column Text (and a long title)

- Default font for slides is Arial 28pt.
- We can size fonts up or down, depending on how much information we need to put on a slide.

In case you want to fit more on a page, you can choose a smaller font; or if you want to emphasize a phrase, you can choose a larger font:

In general, we don't want authors to make the fonts too small, but it is always a matter of opinion and requires flexibility.

## Fonts Sizes

This is the default font size, \normalsize, 28 point.

## This is \fiftypt

This is \thirtysixpt
This is \thirtypt
This is \twentyeightpt
This is \twentysixpt
This is \twentyfourpt
This is \twentytwopt
This is \twentypt
This is \eighteenpt
This is \sixteenpt

To contain font change, precede it with \{ and follow changed text with \}.

This code:
Here is \{\sixteenpt sixteenpt
text\} and here is \{\thirtysixpt thirtysixpt text\}.

Produces this result:
Here is sixteenpt text and here is thirtysixpt text.

Pacific
Northwest
national laboratory

## Alternative Two Columns commands

You choose the width of each column using columns:
\begin\{columns\} [T] }
\begin\{column\}\{0.6\textwidth\} }
left column text...
\end\{column\} }
\begin\{column\}\{0.25\textwidth\} }
right column text
\end\{column\} }
\end\{columns\} }

Pacific Northwest

## Using Columns Commands

- These are two columns of width 0.6 and $0.25 \backslash t e x t w i d t h$
- The vertical alignment of the columns relative to one another can be changed

## Figures and subfigures

- The subcaption package provides the subfigure environment
- The subfigure environment can be used to align and caption subfigures inside a figure float
- The subcaption package v3.3-111 and newer is compatible with Beamer

Subfigure label

Another subfigure label
Fig. 1. Figure caption.

Pacific
Northwest

More slide organization: Blocks and Tcolorbox

## Blocks

- Block takes an argument: \begin\{block\}... \end\{block\}\{<title>\} }
- You can use this to make : theorem, example, definition etc.

## An Equation

Here's a block containing an equation:

$$
\begin{equation*}
\partial_{t} p(X, t)+\nabla \cdot \mathbf{v}(X, t) p(X, t)=\nabla \cdot[\mathbf{D}(X, t) \nabla p(X, t)] \tag{1}
\end{equation*}
$$

## Using tcolorbox

This one is a tcolorbox box, with an unnumbered equation:

$$
\partial_{t} p(X, t)+\nabla \cdot \mathbf{v}(X, t) p(X, t)=\nabla \cdot[\mathbf{D}(X, t) \nabla p(X, t)]
$$

## Bullets Change as We Create Multi-Level Lists

- Features in Turing:
- CUDA cores (SM, Streaming Multiprocessor)
$\checkmark \quad$ Compute Capability 7.5
$\checkmark \quad$ Traditional rasterized shaders and compute
$\checkmark \quad$ Concurrent execution of integer and floating point operations
- Ray-tracing (RT) cores
$\checkmark \quad$ Bounding volume hierarchy acceleration[4]
$\checkmark \quad$ Shadows, ambient occlusion, lighting, reflections
- This slide is for full-text content, no images.
- Font sizes reduce as we create the levels in a list, starting with Arial 28
- Then Arial 24
$\checkmark \quad$ And then Arial 20
- And Arial 18 - I think that's pretty small for a slide but someone may need it.
- Turing architecture discussion from Wikipedia

品
Pacific

NATIONAL LABORATORY

## Numbered Lists

- Like bulleted lists, numbered lists indent and reduce in font size.
- In the report template, the lists go from numbers, to lower- case alpha, to lower-case Roman, but people can pick others in the PPT version.

This is in 24 pt Arial, set with \twentyfourpt after the initial \begin\{itemize\}. }

1. This is a first-level numbered list
2. Arial 28 point, same as the bulleted list
a. This is a second-level numbered list
b. Arial 24 point.
i. And last but not least a third-level numbered list.
ii. Hopefully no one wants to go further than that.
iii. Font is Arial 20 point.
3. Computational functions
a. GPU accelerated video decoding
b. Video decoding processes that can be accelerated
4. 3 GPU forms
a. Terminology
i. Usage specific GPU
b. Dedicated graphics cards

## An Example Table or Two

- The command
\coppertoptable\{<number>\} uses the argument to determine the number of columns, between 1 to 5 columns.
- The cells have alternating light and dark bands.

## One Column Table

Cell Content goes here and wraps to fit. You may have a lot of content to fit in the table. A single column table may be the right format to use.

Single line

## An Example Table or Two

- This table has two columns.

| Two Column Table | Col Two |
| :--- | :--- |
| Cell Content goes here <br> and wraps to fit. | Second Column |
| Single Line | Single Line |
| 1234 | 5678 |

Pacific
Northwest

## Four Column Table

- This example has four columns

| Typical <br> Table | With <br> Column <br> Headings <br> that wrap | Columns <br> Resize to Fit <br> Content | Four Cols |
| :--- | :--- | :--- | :--- |
| Cell Content <br> goes here | Looks like <br> the font <br> adjusts to the <br> table width. | l'd go with <br> whole <br> numbers for <br> font sizes, <br> TPT does <br> strange <br> things. | Another |
|  | 20 | Single line | Single line |
| Single line | Single line | Sing |  |
| 1234 | 567 | 89 | 1011 |

## Pacific

## Turing

Microarchitecture

- Turing is the codename for a graphics processing unit (GPU) microarchitecture developed by Nvidia as the successor to the Volta architectures.
- Caption is Arial 18 bold

## Slide with Four Images

- This particular template four images with optional captions.
- Looks like images are cropped to fit into the square shapes.
- Author will need to resize images to make for a good fit if they aren't square to start with.

TuX the Penguin Back View.
